

Amigo

Covert Bluetooth operation of your smartphone, PTT App, or portable radio.

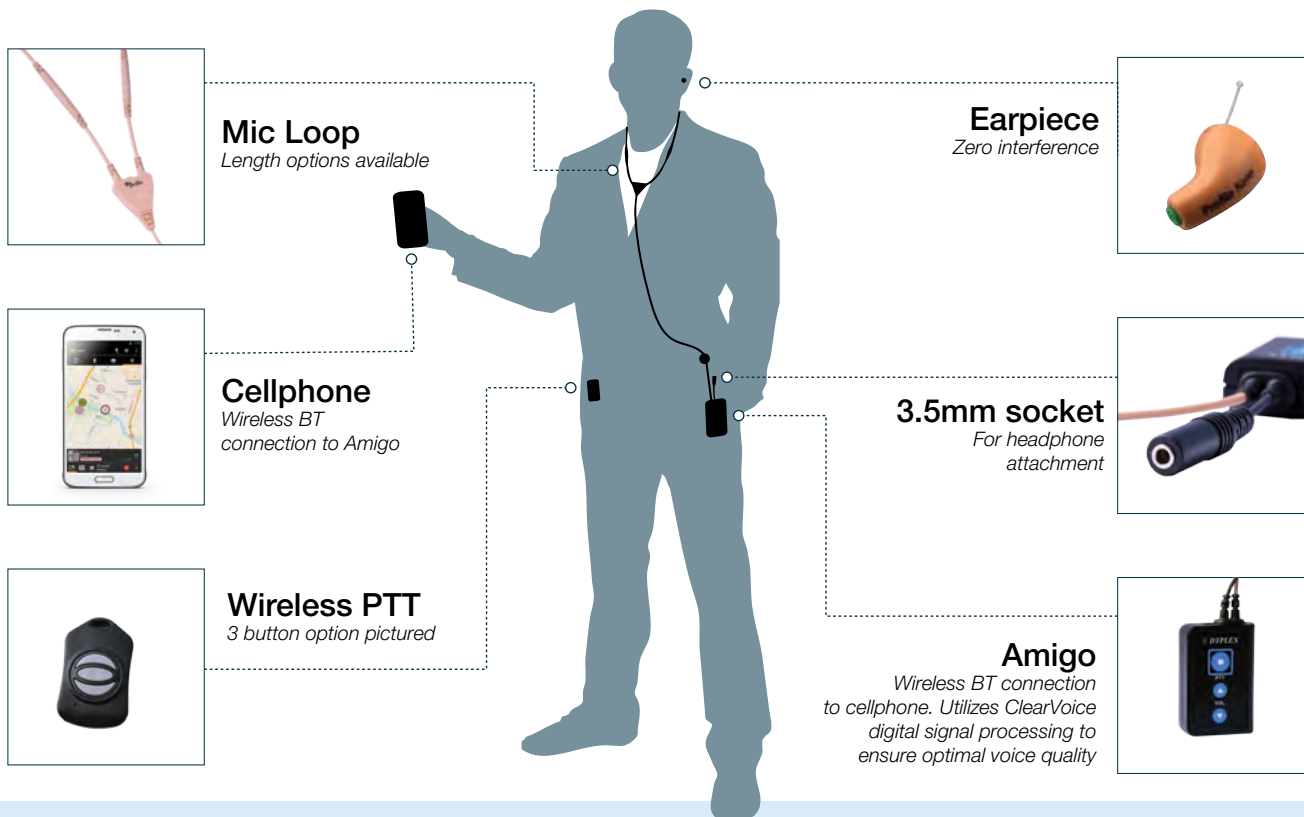

True Covert Operations

Transmit and receive without ever touching your phone or radio.

The Amigo provides a covert wireless solution for most Bluetooth 4.0 BLE enabled devices. It utilizes the Profilo Nano from Phonak Communications, which is the world's only covert ear piece immune to Electro Magnetic Interference. Communicating over a secure Bluetooth link, the Amigo provides a completely wireless connection to your smartphone, portable radio or Push to Talk App.

- Compatible with most Push To Talk (PTT) Apps
- Secure pairing
- Once paired, the Amigo is no longer visible to other Bluetooth devices
- No wires to the phone or radio
- Remotely control PTT and volume control

DYPLEX
COMMUNICATIONS LTD.

The purest audio, the smallest size

The audio crackling and white noise caused by electro magnetic interference (EMI) from alarm systems, vehicles and other electronic circuits can lead to missed commands and in turn ruined covert operations. The same is true if your earpiece is so obvious that it is spotted by the target. Profilo Nano by Phonak is the world's smallest covert earpiece and thanks to the transductive technology is completely immune to EMI, ensuring you remain covert and never miss an incoming message.

PHONAK

Amigo Module	
Dimensions	66mm x 45mm x 19mm (L x W x D)
Battery Type	2 x AAA Batteries Alkaline or Rechargeable
Battery Life	25 h; tones heard over earpiece for end of life warning
Operating Range	To Phone or Radio: ~10m
Certifications	FCC, IC, CE
Pairing	NFC and standard BT
Current Compatibility	Most BT enabling devices as standard headset, Harris BeON, Sonim, Kodiak, Zello, Motorola WAVE, Motorola APX, Mobile Tornado

Wireless PTT	
Dimensions	57mm x 35 x 11mm (L x W x D)
Battery Type	1x 2032 battery
Battery Life	> 6 months with normal usage tones heard over earpiece for end of life warning
Operating Range	To Amigo: ~2m
